

CLEEMANN to launch high speed and shock tested chairs

German based seating specialist **Cleemann Chair-Systems GmbH** will prove its 'Seatnology' again bringing latest developments in high speed and shock tested chairs to the shipbuilding market.

CLEEMANN
CHAIR-SYSTEMS

Delivered to the German Bundesmarine and installed on five newbuild Corvettes, their chair model 'Nautic Star' successfully absorbed a force of 120g during an official navy department test. This means any crew member sitting in the chair is protected from the effects of water bomb blasts underneath the ship.

Nautic Star

Cleemann's chair models 'Wavemaster' and 'Operator IMO' are especially developed for the requirements of the fast ferry and high speed boat market. The Wavemaster successfully passed a crash-test with 12g at the German Technical Inspection Authority (TÜV), supervised by the inspectors of the DNV Det Norske Veritas, whilst the Operator IMO has been certified by Germanischer Lloyd.

Wavemaster

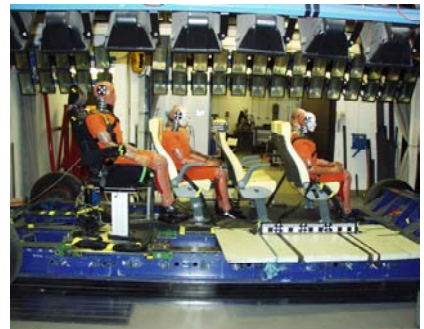

Operator IMO

The range of Cleemann Chair-Systems for fast ferries and catamarans is completed by a range of passenger seats, designed in order to ensure the most comfortable and save travelling on board. They are certified by DNV (12g/ dynamic test) and equipped with fire-resistant
